Comparing Military Hospitals

As of September 1, 2014

There are currently **54 military hospitals** in the United States and overseas that provide inpatient services. Many compare poorly to leading civilian hospitals on measures of safety in maternity care. Of those independently evaluated for surgical care, half posted high rates of complications. Most of the hospitals serve an average of 30 or fewer inpatients a day. Some have been marked by the Pentagon for downsizing (2014).

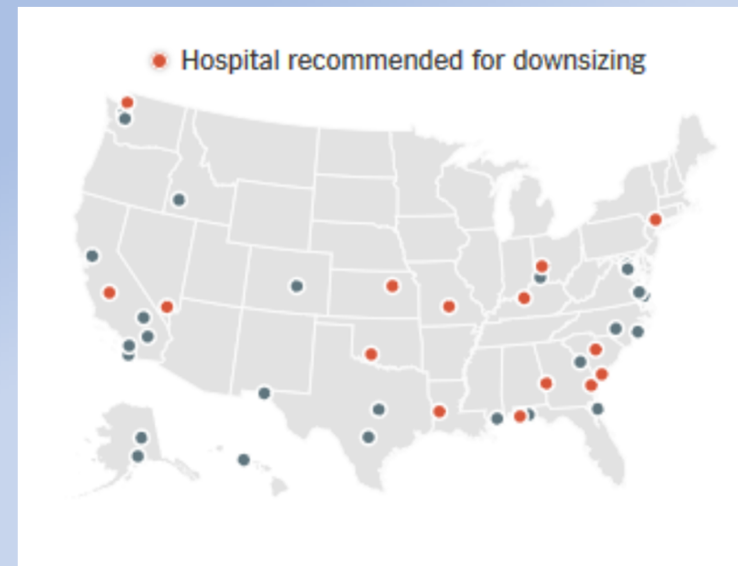

Scenario to consider based on Fort Riley (KS) and Wright Patterson Medical Center - 2014 data

Fort Riley (U.S. Army)

- 24 staff beds
- Population 48,000, which includes Soldiers, family members, retirees and Department of the Army civilians (2018)

Wright Patterson Medical Center (Air Force)

- 62 Staff beds
- Population 29,300 people, which includes Airman, family members, retirees, and the Department of Air Force civilians (Husley, 2022).

Need to Modernize Civilian/Military/Veteran Affairs Hospital Infrastructure

(COL Jennifer Gurney et al., 2018) Joint Combat Trauma Center

- MustER™, unlike tents and current COVID-19 Alternate Care Sites, is designed with strict infection-control measures in mind.
- We are building a modern field hospital, alternate care site for a highly contagious disease.

MustER Capabilities – Medical

- Increase capacity up to 1,200 beds
- Modular
- Mobile
- Stackable – like Legos
- Triage
- Emergency Care
- Surgical Care
- Veterinary Care
- Radiology
- Blood Banking
- Lab/Pharmacy Unit
- Operation Stress Management
- Outpatient/Inpatient Services
- Physical Therapy
- Medical Logistics
- Operational Dental Care
- Screening
- Clinical Management Unit
- Vaccinations
- Women's Health
- Refugee Care
- Support Humanitarian Missions
- Military Grade
- **Deployable anywhere in the world**
- **Alternate power (solar and wind)**

Task 3: Civilian Aerial View/Call-outs - DRAFT

cdme.osu.edu

THE OHIO STATE UNIVERSITY The Center for Design and Manufacturing Excellence

There is currently no military or civilian mobile field hospital equipped to deal with a highly contagious disease. MustER MRS intends to develop a next-generation modern day hospital that the U.S. may use to support warfighting, humanitarian missions, and as part of the National Disaster Medical System in the event of a civilian national emergency.

The Solution – Our Product

Combining these technologies will create a military-civilian medical response system to combat medical bed surge in a biological threat environment.

COVID-19 Isolation Pod

Technical Readiness Level (TRL – 9)

Mobile Medical Unit – mitigate the spread of infectious diseases

Technical Readiness Level (TRL – 9)

Technical Readiness Level (TRL) - 3
